

GEM & ATR – Execution & Build Architecture

System Structure

- API Gateway fronting all services
- Containerized microservices
- Event-driven automation backbone
- Managed cloud deployment strategy

Infrastructure Model

- Infrastructure-as-Code (Terraform/Pulumi)
- Environment parity (Dev, Stage, Prod)
- Kubernetes or Serverless deployment
- Observability-first deployment

Threat & Risk Controls

- Privilege escalation prevention
- Event isolation & dead-letter queues
- Audit logs for financial transactions
- Security scanning in CI/CD pipelines
