

GEM & ATR – Enterprise Governance & Scaling Model

Enterprise Architecture Principles

- Domain-driven bounded contexts
- API-first interoperability
- Immutable audit trail enforcement
- Version-controlled service contracts

Data & Compliance Governance

- Data classification model
- Retention & encryption controls
- Financial traceability
- Privacy-aligned data handling

Scaling & Global Expansion

- Horizontal auto-scaling services
- Multi-region deployment strategy
- Currency abstraction layer
- Regional compliance modules

AI Governance Framework

- Human-in-the-loop enforcement
- Transparent decision logging
- Model version tracking
- Bias monitoring and audits
